

# Secure it Easy™

## USB-Firewall – Control USB Devices

32bit Version: 1.2.0.0

Your Data is only as safe as your endpoints. Without protecting USB Ports your data can be leaked, stolen, damaged or otherwise compromised.

Unauthorized use of portable storage devices, if it is USB Flash Drives, iPods, MP3 Players, digital cameras, portable HDDs, mobile phones or other devices pose the biggest threat to your PC today.

Without controlling the use of portable storage devices, Spyware and Malware intrusion whether intentional or accidental cannot be prevented.

### **Firewall for your USB Ports**

*Secure it Easy acts like a firewall for your USB Ports by giving the PC's Administrator control of what portable storage device can be used in connection with the PC as TrustedDevices. All other devices that are not explicitly trusted are excluded and cannot be used on the protected PC.*

*With Secure it Easy your data remains protected and safe on your PC. You have the assurance that your data will not leave your PC on an untrusted storage device. Your data is additionally protected from Viruses, Spyware or Malware that can be introduced through portable storage devices.*

### **Endpoint Security for your PC**

Protects PCs from threats posed by portable storage devices like USB Flash Drives, MP3 Players, iPods, digital cameras and other devices with internal memory.

### **Manage Portable Storage Devices (TrustedDevices)**

The PC's administrator is able to authorize the use of specific devices. These authorized devices are called TrustedDevices. By authorizing a device, a user will be allowed to access only one or more particular devices. Any other portable storage device connected that was not authorized by the PC's administrator will not function. Self executing devices such as U3 smart Drives (USB Flash Drive with CD-ROM autorun functionality) will not be functional, unless authorized and thereby do not pose a threat.

### **E-Mail Notification**

Instant E-Mail notifications are sent to the PC Administrator if a device without authorization is connected to the PC.

### **Device Logging**

A device log is recorded for future reference and audit of all devices connected to the PC.

### **Network "Offline" Capability**

Protected PCs or notebooks that are temporary disconnected from the internet remain protected and notifications are transmitted upon the next network connection.

### **Administrative Control / Administrative Password**

An optional administrative password can be set to authorize only one PC administrator to configure Secure it Easy.

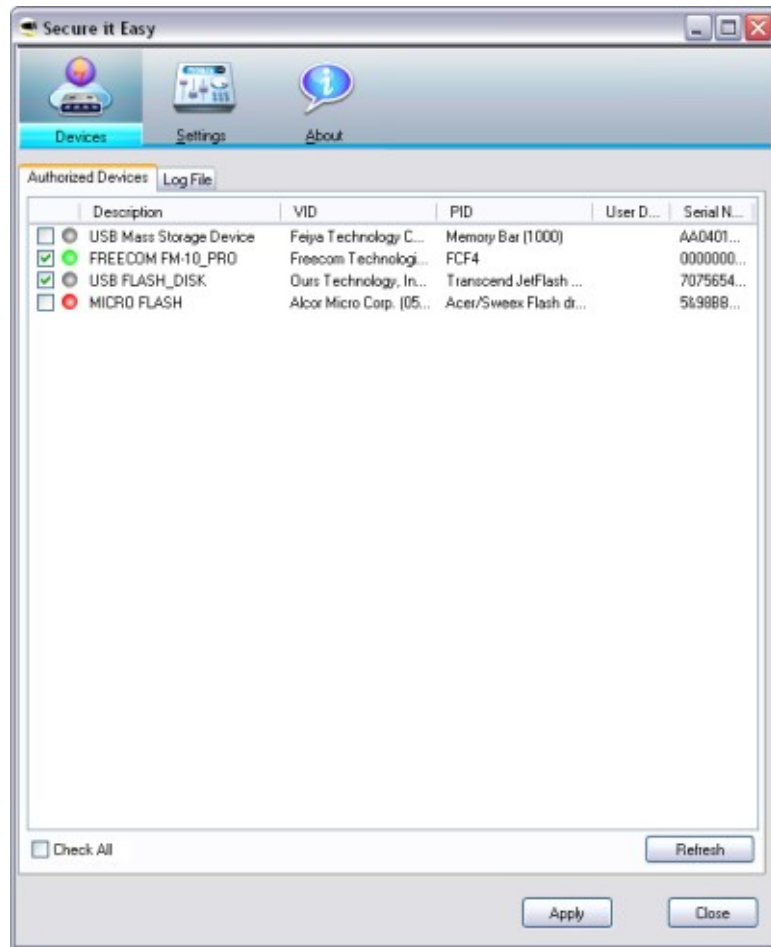

Know who and how data enters or leaves your PC by enforcing your endpoint security policy. Protecting your USB Ports has never been easier.

## SYSTEM REQUIREMENTS

- Windows Vista 32 bit (all versions)
- Windows XP (SP2) 32 bit
- Windows 2000 (SP4)
- .Net 2.0 Framework
- Administrative Rights
- 32 MB of HDD space

The intuitive interface allows for endpoint protection and configuration within minutes.

Secure it Easy is ideal for the use in small and medium sized companies.

Secure it Easy offers users a safe and secure working environment with portable storage devices. Users efficiency is not restricted since any USB device that was classified as a TrustedDevice can be used continuously on the PC while the PC administrators endpoint security policy is enforced.

The Secure it Easy user interface is available in English, German, French and Romanian.
